BioTech-Chem Library Search Results Feedback Form (Optional)

The search results generated for your recent request are attached. If you have any questions or composition (compliments or complaints) about the scope or the results of the search, please contact the RioTec searcher who conducted the search or contact:

Mary Hale, Supervisor, 30 CM-1 Room 1E01

>	I am an examiner in Workgroup: /647 (Example: 1610)
>	Relevant prior art found, search results used as follows:
	102 rejection
	103 rejection
	Cited as being of interest.
	Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	Foreign Patent(s)
	Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
Þ	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Search results were not useful in determining patentability or understanding the in

System for transporting nucleic acid into cells, useful e.g. in gene therapy and for generating transgenic animals, comprises binding agent linked to nucleic acid, surface ligand and lytic agent

WPI; 2000-281993/24.

nucleic acid delivery; cancer.

```
complexy, cousisting of a bilinging interacte bound of a lytic agent. The binding molecule is spermine or a spermidine derivative. Nucleotide binding molecule is spermine or a spermidine derivative. Nucleotide agequences AAA36633-A36652 and peptide sequences AAV98456-Y98500 are used in the construction of the transporter system of the invention. The transporter system is used in gene therapy, particularly to deliver nucleic acids to hepatocytes, muscle cells or bone forming cells, e.g for treating cardiovascular disease, cancer, and infection. The transporter systems are also used to create transgenic animals (as models for human carcinogenesis or disease or for drug testing). Other uses include transforming cells to produce proteins, or transfecting cells in vitro to study the function of the nucleic acid. The use of a surface aligned allows specific targeting of selected cells and tissues. The lytic agent provides for release of the nucleic acid into the cellular interior, from endosomes, without reguiring endosomal or lysosomal
                                                                 The present invention relates to a transporter system for delivering nucleic acid to a cell. The system comprises a nucleic acid binding complex, consisting of a binding molecule bonded non-covalently to the

The invention relates to a nucleic acid transport system (NTS) for delivering nucleic acid into a cell. The NTS contains but is not limited to 5 components: (a) the nucleic acid or a macromolecule to be delivered; (b) a moiety that recognizes and binds to a cell surface receptor or antigen or is capable of entering a cell through cytosis; (c) a nucleic acid or macromolecular molecule binding moiety; (d) a moiety that is copable of moving or initiating movement through a nuclear membrane; and, copable of moving or initiating movement through a nuclear membrane; and, cor (e) a lysis moiety that enables the transport of the entire complex or (from the cells unface directly into the cytoplasm of the entire complex collivers nucleic acid into the cellular interior as well as the nucleus of specific nucleic acid accordingly. The NTS can also be used to create transpent animals for assessing human disease, such as cancer, in an animal model. The NTS can be used in vitro with tissue culture cells: The vitra allows the role of various nucleic acids to be studied by targeting specific expression into specifically targeted tissue culture cells. The analysis agent within the NTS avoids the problem of endosommal/lysosommal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents the nuclear ligand, Pep20, used in a nucleic acid transporter system uses nucleic acid transporter system uses nucleic acid binding complexes containing surface ligands which are capable of binding to a cell surface receptor and entering the cell through cytosis. The compounds of the invention are either ligands, binding molecules (surface ligands), lysis agents, spacer molecules or their intermediates. The ligands, binding molecules, lysis agents and spacer molecules are used in nucleic acid transporter systems to deliver nucleic acid into specific cells e.g. in gene therapy to deliver nucleic acid into hepatocytes,
                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid transport; cytosis; ligand; lysis agent; spacer molecule; gene therapy; hepatocyte; muscle; bone forming cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleic acid transport system, useful for creating transgenic animals for assessing human disease such as cancer in an animal model -

This invention describes a novel system (I) for delivering a nucleic acid to a cell, comprising a binding complex comprising a ligand binding nolecule noncovalently bound to a nucleic acid and covalently linked to a surface ligand, and a second binding complex comprising a second binding nuclear ligand. The complexes are simultaneously bound to the nucleic acid and covalently linked to a nuclear ligand. The complexes are simultaneously bound to the nucleic acid transporter system can also be used in a method for the in vivo targeting of the insertion of DNA into a cell. It can also be used in processes for producing transformed cell lines. The system can be used to deliver a variety or proteins and polypeptides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                growth factor; clotting factor; apolipoprotein; receptor; drug; oncogene; tumor antigen; tumor suppressor; viral antigen; parasitic antigen; bacterial antigen.
                                                                                                                                                                                Nucleic acid transporter system for delivering nucleic acid into a cell, useful for delivering proteins and polypeptides to cells, including growth factors, enzymes, hormones, and tumor suppressors
                                                                                                                                 241 YTLDPHTRWEYCAIKİTCADNİMNDIDVPLETIECIQGQGEGYRGIVNTIWNGIPCQRWDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HGF; enhance growth; preparing transgenic animals; hepatic disease; clinical diagnostic reagent; drug.
                                                                                 Human HGF comprises an alpha-chain of 440 amino acids and a beta-chain of 234 amino acids. There are 4 kringle domains in the alpha-chain, similar to that of plasmin; the beta-chain has about 37 per cent homology with the beta-chain of plasmin having serine protease activity. Homology of the amino acid sequence of rat HGF and human HGF is 91.6 per cent in the alpha-chain and 88.9 per cent in the beta-chain. HGF has been found to be an agent for nephrocyte growth and is useful as a treatment for renal failure.
                                                                                                                                                                                                                                                                                                                                                                                                              YTLDPHTRWEYCAIKTCADNTMNDTDVPLETTECIQGQGEGYRGTVNTIWNGIPCQRWDS

                                                                                                                                            factor. It has physiological activity, and using it chharced growth of hepatocytes is possible. It is useful as a clinical diagnostic reagent, or a drug for treating hepatic disease.

Human modified (NP) HGF-A and -B fragments were prepared from human HGF CDNA. This was amplified by PCR to give a human NP-HGF DNA fragment that was transformed into E.coli. (see AAQ47833) for a related sequence.

Human modified (NP) HGF-A and -B fragments were prepared from human HGF CDNA. This was amplified by PCR to give a human NP-HGF DNA fragment that was transformed into E.coli. (see AAQ47833) for a related sequence.

post-operative tissue damage; drug; cardiac angiopathy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 þe
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence represents a single chain protein which selectively enhances the growth of vascular endothelial cells. This protein was produced by the human tumour cell line HUCGA-II or HUCGA-III. This protein enhances the formation of new blood vessels and may used to enhance healing of wounds, burns injuries, decubitus or post-operative tissue damage. It may also be used as a drug for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           .

                                                                                                                                                                                                                                                    391
                                                                                                                                                                                                                                                                                              The present sequence is the human hepatic parenchymal cell growth factor (HGF), which has a molecular weight of 76.92 kD estimated by SDS-PAGE, parenchymal cell growth activity, which is lost following heat treatment at 80 degrees C for 10 minutes and strong affinity towards heparin. It may be used to treat and prevent ischaemic diseases, e.g. blood reperfusion disorder, ischaemic reperfusion disorders in liver transplant, cucte liver failure and organ disorder during organ transplant. For adults, it is administered at

                                                                                                                                                                                                                                                                                      91
                        A pig liver derived cultured epithelial cell line was cultured in DMEM, cow embryo serum and N-2-hydroxyethylpiperazine ethane sulphonic acid to confluence. The medium was then changed to serum and glucose free DMEM, and the oxygen concentration reduced to less than 2% The cells were cultured for 6 hours, and then for another hour at 95% air/5% carbon dioxide (reoxygenation). HGF was added lactic acid dehydrogenase (LDH) by 49.6% when added before lactic acid dehydrogenase (LDH) by 49.6% when added before ng/Ml (free LDL was 100% in the absence of HGF).

```
This sequence represents the wild type full length sequence of human hepatocyte growth factor (HGF). HGF is isolated from human serum hepatocyte growth factor (HGF). HGF is isolated from human serum condise a disulphide linked heterodimer derived by proteolytic cleavage of this pro-hormone form between residues 494 and 495. This generates a coff this pro-hormone form between residues 494 and 495. This generates a condise month composed of an alpha-subunit of 440 amino acids (mol. wt. 69 and beta-subunits are encoded by a single open reading frame. The alpha subunit contains four kringle domains based on their homology to the beta subunit shows high homology to, the catalytic domain of serine proteases. However two of the three residues which form the catalytic proteases. However two of the three residues which form the catalytic critad of serine proteases are not conserved in HGF. Therefore, the precise function of the beta chain remains unknown. The invention contains the biological activity of wild-type HGF. Therefore, the treatment of pathological conditions associated with chronic HGF receptor such as malignancies associated with chronic HGF.
```

                                     contain amino acid changes at residues 492-494. (Note - this sequence is not given in the specification but is based on the HGF sequence given in the specification but is based on the HGF sequence given in AAR20005). The generated mutant contains the sequence Lis-tray-Arg-Thr, which replaces the wild type sequence is activated to a two chain protein by procease cleavage between residues protease recognition site, putatively introducing a Factor Xa recognition site, putatively introducing a Factor Xa recognition injury in a blood vessel. (See AAR87522-5 for different HGF derivs.) The onvel HGF derivs were generated by point mutations using the oligonucleotides AAT06762-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Xa;

AAR20005). The generated mutant contains the sequence bytes in the sequence Lys-Gln-Gly-Arg-Ile, which replaces the wild type sequence Lys-Glu-Leu-Arg-Val. The HGF is translated as single chain protein which is activated to a two chain protein by protease cleavage between residues 494-5, producing the alpha and beta chains. The novel sequence alters the protease recognition site, putatively introducing a Factor Xa recognition site, and be activated specifically at the site of injury in a blood vessel. (See AAR87522-5 for different HGF derivs.) The onvel HGF derivs. were generated by point mutations using the oligonucleotides AAT06762-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The amino acid of the hepatocyte growth factor (HGF) generated to contain amino acid changes at residues 492-494. (Note - this sequence not given in the specification but is based on the HGF sequence given
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          331
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       391

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The amino acid of the hepatocyte growth factor (HGF) generated to contain amino acid changes at residues 492-494. (Note - this sequence is not given in the specification but is based on the HGF sequence given in AAR20005). The generated mutant contains the sequence
Lys-Gln-Gly-Arg-Thr, which replaces the wild type sequence
Lys-Gln-Gly-Arg-Thr, which replaces the wild type sequence
Lys-Glu-Leu-Arg-Thr, which replaces the wild type sequence
Lys-Glu-Leu-Arg-Val. The HGF is translated as Single chain protein which
Lys-Glu-Leu-Arg-Val. The HGF is translated as Single chain protein which
sa activated to a two chain protein by procease cleavage between residues
494-5, producing the alpha and beta chains. The novel RGF deriv can be activated specifically at the site of
injury in a blood vessel. (See AAR87522-5 for different HGF derivs.). The
onvel HGF derivs, were generated by point mutations using the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ;

(Note - this sequence is not given in the specification but is based on the HGF sequence given in ARZ00005). The generated mutant contains the sequence Lys-Gln-Gly-Arg-Val, which replaces the wild type sequence Lys-Gln-Leu-Arg-Val. The HGF is translated as single chain protein which is activated to a two chain protein by protease cleavage between residues protease recognition site, putatively introducing a Factor Xa recognition site. The novel HGF deriv. can be activated specifically at the site of injury in a blood vessel. (See AAR87522-5 for different HGF derivs.) The novel HGF derivs. were generated by point mutations using the oligonucleotides AAT06762-5.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Hepatocyte growth factor; protease; cleavage recognition site; Factor Xa; injury; blood vessel; point mutation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Sequence 50, Application US/08460890A

Patent No. 594109

GENERAL INFORMATION:

APPLICANT: Smith, Louis C.

APPLICANT: Gottchalk, Stephen
TITLE OF INVENTION: MUCLEIC ACID TRANSPORTER SYSTEMS AND
TITLE OF INVENTION: MUCLEIC ACID TRANSPORTER SYSTEMS AND
TITLE OF INVENTION: METHODS OF USE
NUMBER OF SEQUENCES: 62 West Fifth Street
STREET: 631 West Fifth Street
STREET: 631 West Fifth Street
STREET: 631 West Fifth Street
STREET: 631 West Fifth Street
STREET: 631 West Fifth Street
STREET: 105 Apples
CONTRY: US-A
ZILE 4701 - 206
COMPUTER RADABLE FORM:
MEDIUM TYPE: 3.5 Diskette, 1.44 Mb
MEDIUM TYPE: 3.5 Diskette, 1.44 Mb
MEDIUM TYPE: 815-006
COMPUTER TABABLE FORM:
MEDIUM TYPE: 1.5 TO STREET: 105 M STREET
SOFTWARE: FastSEQ for Windows 2.0

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 1, Application US/07838410

Patent No. 5328836

GENERAL INFORMATION:
PAPLICANT: SHIMA, NOBUYUKI

APPLICANT: HIGASHIO, KANJI

APPLICANT: HIGASHIO, KANJI

APPLICANT: TAKAOKA, HIROAKI

APPLICANT: TAKAOKA, FISUKE

TITLE OF INVENTION: PLASMIDS CONTAINING DNA ENCODING THE:
TITLE OF INVENTION: PLASMIDS, AND PRODUCTION MEDTHOD OF BIOLOGICALLY ACTIVE

TITLE OF INVENTION: SUBSTANCE USING THE TRANSFORMED CELLS WITH THE

TITLE OF INVENTION: SUBSTANCE USING THE TRANSFORMED CELLS

NUMBER OF SEQUENCES:
ADDRESSEE: MILLEN, WHITE, ZELANO & BRANIGAN, P.C.

STREET: 2200 CLARENDON BLVD.

; GENERAL INFORMATION:
; APPLICAMT: HOffmann-La Roche Inc.
; TITLE OF INVENTION: PEG Conjugates of NK4
; FILE REPERENCE: 20895
; CURRENT APPLICATION NUMBER: US/10/081,309
; UNMBER OF SEQ ID NOS: 2
; SOFTWARE: PatentIn version 3.1
; SEQ ID NO 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ORGANISM: homosapiens
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Similarity
